## **COVID-19 Update**

### **Actions to maintain delivery continuity to Axetris Customers**

Dear Customer/Sales Partner

At Axetris, we take our role as a trusted supplier to OEMs worldwide seriously. In times of continuing uncertainties with regards to the COVID-19 pandemic, we would like to re-confirm that we have implemented appropriate measures to ensure common deliveries of all Axetris products over the coming months.

- Ensuring the health of our employees and partners:
  - Internal rules and measures to maintain workplace hygiene in line with the guidelines issued by the Swiss Federal Office of Public Health
  - Limiting all personnel travel, external visits and in-house trainings and seminars
- Ensuring supply continuity to customers and partners:
  - Close and continuous monitoring of any possible disruptions to our supply chain: At present, no critical components have been identified posing a possible risk due to delivery disruptions
  - Increasing stock quantities of critical components, as well as end products at Axetris Switzerland and selectively at our international sales offices to further mitigate delivery risks that may arise in the coming months
  - Maintaining close contact to all key customers and partners with regards to the organization of anticipatory delivery requirements

At present, we do not anticipate any delivery bottlenecks compared to a normal operating scenario.

In case you may have detailed questions regarding our responsiveness, our handling of the current situation, or with regards to our delivery capacity, please do not hesitate to contact us.

Meanwhile, we wish all of you to stay healthy and in a positive spirit!

Best Regards

Dr. Patrick Blessing  
Managing Director
