

Leister GIBLI AW -

The heat gun for industrial companies in the Maghreb

GIBLI AW

GIBLI AW is a robust and ergonomic angled heat gun from Leister that boasts a "Swiss made" label.

The tool is ideal for shrinking cables, heating and forming in the automobile industry, lap welding of truck sheeting, and deburring plastic parts.

Moroccan engineers and workers appreciate the GIBLI AW's advanced technical features and ease of use. Temperature and air volume can easily be adjusted with the proven and intuitive "e-Drive" operating unit.

Thanks to the easy-to-grip, two-component frame, the GIBLI AW fits perfectly in the hand. The included stand and handy hanging hook keep it accessible on the job. The air filters can be easily removed and cleaned. And of course, all nozzles from previous models fit the new GIBLI AW.

The GIBLI AW is a top-performing tool that has improved both quality and productivity for Moroccan companies and earned the trust of the industry.
